EDUCATION

Santa Clara University *Graduated Jun 2026*

B.S. in Computer Science, Minor in Graphic Design (GPA: 3.70/4.0, Cum Laude)

Relevant Coursework: Data Structures, Algorithms, Software Design, Computer Networks, Operating Systems, Web Development

SKILLS

Languages: Python, Java, C/C++, Javascript/Typescript (React, Node, Express), HTML/CSS, Flutter/Dart, PostgreSQL, MySQL

Frameworks/Tools: Git, Linux, Vite, Vitest, Jest, Cypress, Bootstrap, Figma, Adobe Photoshop/Illustrator

Practices: Agile/Scrum, REST APIs, CI/CD, Unit/Integration Testing

Cloud: AWS, Supabase

PROJECTS

SCU Marketplace *Sep 2025 - Dec 2025*

Full-Stack Software Engineer *Javascript (React, Express, Node), Vite, PostgreSQL, Vitest, Jest, Cypress, Figma*

- Built a full-stack marketplace web app for SCU students using React/Vite, Express/Node.js, and PostgreSQL, exposing RESTful APIs for listings, messaging, and authentication in an Agile, sprint-based workflow with weekly stand-ups.
- Implemented JWT-based authentication, CRUD listing management, buyer–seller messaging, and item detail views, backed by unit tests (Vitest), integration tests (Jest), and end-to-end tests (Cypress) integrated into a CI pipeline to catch regressions before merge.

WebCrack - Hackathon Finalist *Feb 2024*

Front-End Developer *Javascript (React), LangChain, HTML/CSS*

- Built a Chrome extension that detects bias in articles using React.js, LangChain, and the ChatGPT API, improving analysis accuracy through advanced prompt engineering.

EXPERIENCE

Web Developer *Apr 2026 - present*

Pujukan *Javascript (React), Vite, PostgreSQL, Supabase, i18next, Figma*

- Developed a full-stack website for a local meat retailer using React, Vite, and Supabase (PostgreSQL), delivering a fast, modern browsing experience for 20+ meat offerings per client requirements.
- Architected a Supabase/PostgreSQL backend that enables the non-technical business owner to independently update meat offerings, descriptions, and pricing in real time without developer support, streamlining management of the full product catalog.
- Implemented multi-language support using i18next for English and Korean, making the site accessible to a broader customer base and demonstrating internationalization (i18n) best practices.

Software Engineer *Oct 2024 - present*

EPIC Research Lab *Javascript (Node, React), Figma*

- Led UI/UX design initiatives in Figma, collaborating with product and backend teams to create intuitive, responsive interfaces for technical and non-technical users.
- Diagnosed and resolved rendering and performance bottlenecks in a React.js map component, improving dashboard responsiveness and stability.
- Facilitated communication between hardware engineers and non-technical stakeholders to translate IoT data requirements into user-facing features, reducing design iteration cycles.

Instructor *Jul 2025 - June 2026*

Coding Mind Academy *Python, Flutter/Dart*

- Taught Python and Flutter development to 15+ students across varied skill levels, improving average assessment scores by 25% through customized curriculum and real-time feedback.

Web Developer *Jun 2025 - Sep 2025*

Secure Benefit *HTML/CSS, Javascript*

- Designed and developed a responsive, accessible company website for Secure Benefit (https://www.securebenefitis.com/), an employee benefits insurance provider, using Squarespace, HTML, CSS, and Javascript and hosted on Google Domains.

LEADERSHIP

Daybreak KPOP Dance Crew *Sep 2022 - June 2026*

Co-Chair, Events Coordinator

- Directed annual dance showcases drawing 300+ attendees, coordinating 30+ members, 100+ performers, and project timelines.
